Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shioya et al (US 5,928,776) in view of JP-10-077359 substantially as set forth in Paper no. 5.

Response to Arguments

3. The claim rejections have been overcome by the present amendment.
4. Applicant's arguments filed 02/20/2003 have been fully considered but they are not persuasive.
5. The art rejections have been maintained for the following reasons. The arguments that there is no teaching or suggestion in Shioya which would motivate the artisan to select the specified compressive hardness of the present invention are not found persuasive. The examiner maintains that the compressive hardness within a claimed range have been inherently included in Shioya as modified JP'359. First of all, it appears that Shioya as modified JP'359 meets all the structures recited by the claims, PP skin layer/PP foam layer/Expanded PP resin particle layer/solid PP layer. Second, the PP foam layer of Shioya has a gel fraction, melting point, thickness, and expansion ratio within the ranges claimed in the present invention (table 2). Finally, Shioya teaches the

composite material having excellent softness and surface appearance (table 4).

Thus, Examiner believes that there is no reason why the compressive hardness of the PP foam layer could not have been inherently present.

Arguments that the sheathed core beads can be molding at low temperature to provide the effect of compressive hardness of the foam layer are not commensurate in scope with the claims. Nothing about the molding temperature has been included in the claims. The same token is applied to the compression ratio arguments.

In view of the foregoing, it is the examiner's position that the art rejections are sustained.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
